

SCPOR'S VISION, MISSION AND CORE VALUES

VISION

Working together for a healthier Saskatchewan through patient-oriented research.

MISSION

SCPOR will build capacity and collaborations to conduct responsive, equitable, innovative, patient-oriented research that continuously improves the care and health of Saskatchewan people.

CORE VALUES

Patient-Oriented: Empowering individuals, families and communities to engage as full participants in SCPOR governance and the complete range of research and research-related activities.

Builds Capacity: Developing patient-oriented research knowledge, skills, attitudes, policies, processes, and tools; identifying and overcoming barriers.

Collaborative: Establishing and nurturing partnerships among key stakeholders to create new ways of working together for improved outcomes in patient oriented research inclusive of the following:

- Individuals/families/communities;
- Health system agencies and providers;
- Post-secondary institutions;
- Public and private sector policy makers; and
- Researchers and learners across a range of disciplines and organizations.

Responsive: Supporting evidence-informed patient-oriented research that addresses the strategic priorities of the Saskatchewan health system.

Equitable: Addressing health and health care disparities by undertaking patient-oriented research in an impartial, respectful, and culturally responsive way; considering the uniqueness of communities – particularly First Nation and Métis.

Innovative: Achieving new solutions through patient-oriented research that contributes to better health, better care, better value and better teams.

Continuous Improvement: Working on timely, systematic, patient-oriented research that builds the selected body of knowledge in what can be described as a *constant learning system*.
