

Foundations in Patient-Oriented Research

Hosted by the Saskatchewan Centre for Patient Oriented Research

To register: visit scpor.ca < [News & Events](#) page – scroll down to the calendar and click on the module you wish to register for.

Course Description:

This course is designed to give patients a foundational understanding of the research process to help prepare them for their role as patient/family advisor on a research team. It is also intended to help equip patients, researchers and other stakeholders (i.e., health care professionals and system decision-makers) with the skills necessary to engage meaningfully in a variety of roles, including: governance, peer review or other committee work, priority-setting, and the conduct of patient-oriented research and to foster the attitudes essential to the formation and development of genuine partnerships.

The course is intended to enable participants to:

- acquire foundational knowledge about health research to allow them to become full-fledged members of a research team;
- build mutually beneficial partnerships for conducting patient oriented research; and
- work as a team to carry out patient-oriented research and produce high-quality scientific knowledge in a health-related field.

Participants:

This program was created to support patients, researchers, health-care providers and health-care decision-makers interested in or engaged in patient oriented research. The information may not be new to all individuals depending on their background, however, the co-learning opportunity seeks to help individuals see how their knowledge and experience differs from other individuals. The intent is that this awareness will help them as they engage in patient-oriented research by identify where they may need to coach/develop other team member’s knowledge about an area or topic. *Patients, principal investigators and students/trainees working on a SCPOR affiliated patient-oriented research team are strongly encouraged to attend the training sessions.*
